

ACTION AGENDA 4 **Just do it. Now.**

Eliminate benzene

WHO says that there should not be any benzene in the air. Benzene levels are frighteningly high in Delhi.

To control benzene:

- Immediately supply petrol with benzene content less than 1 per cent and put a cap on aromatic content. The Reliance refinery says it can supply. IOC says it can supply. THEN WHY THE DELAY?
- Catalytic converters scavenge benzene. Retrofit old cars with catalytic converters. Insist on emissions warranty so that we know catalytic converters are working.
- As two-stroke technology releases high levels of unburnt hydrocarbons – and therefore high emissions of benzene – provide incentives to phase out old scooters.

One in every 10-15 people in Delhi is likely to get cancer
Do not load Delhi's air with more carcinogens
